### Function and system design

Measuring principle	<p>Electronic acquisition, display, recording, analysis, remote transmission and archiving of analog and digital input signals.</p> <p>The device is intended for installation in a panel or cabinet. There is also the option of operating it in a desktop housing or field housing.</p>
Measuring system	<p>Multichannel data recording system with multicolored TFT display (145 mm / 5.7" screen size), galvanically isolated universal inputs (U, I, TC, RTD, pulse, frequency), digital inputs, transmitter power supply, limit relay, communication interfaces (USB, Ethernet, optional RS232/485), optionally available with Modbus protocol, 128 MB internal memory, external SD card and USB stick. An Essential Version of the reporting software is included for SQL-supported data analysis at the PC.</p> <p><b>i</b> The number of inputs available in the basic device can be individually increased using a maximum of 3 plug-in cards. The device supplies power directly to connected two-wire transmitters. The device is configured and operated via the navigator (jog/shuttle dial), via the integrated web server and a PC, or via an external keyboard. Online help facilitates local operation.</p>
Reliability	<p><b>Dependability</b></p> <p>Depending on the device version, the MTBF is between 52 years and 24 years (calculated based on SN29500 standard at 40°C)</p> <p><b>Serviceability</b></p> <p>Battery-backed time and data memory. It is advisable to have the backup battery replaced by a service technician after 10 years.</p> <p><b>Standard diagnostic functions as per Namur NE 107</b></p> <p>The diagnostic code is made up of the error category as per Namur NE 107 and the message number.</p> <ul style="list-style-type: none"> <li>■ Cable open circuit, short-circuit</li> <li>■ Incorrect wiring</li> <li>■ Internal device errors</li> <li>■ Overrange/underrange detection</li> <li>■ Ambient temperature out-of-range detection</li> </ul> <p><b>Device error/alarm relay</b></p> <p>One relay can be used as an alarm relay. If the device detects a system error (e.g. hardware defect) or a malfunction (e.g. cable open circuit), the selected output/relay switches.</p> <p>This "alarm relay" switches if "F"-type errors occur (F = failure), i.e. "M"-type errors (M= Maintenance required) do not switch the alarm relay.</p> <p><b>Safety</b></p> <p>The tamper-proof recorded data are saved and can be transferred to an external SQL database for archiving in a way that prevents subsequent manipulation.</p>

### Input

Measured variables

#### Number of analog universal inputs

Standard version without universal inputs. Optional input cards (slot 1-3) with 4 universal inputs (4/8/12) each.

#### Number of digital inputs

6 digital inputs

#### Number of mathematics channels

4 mathematics channels (optional). Mathematics functions can be freely edited via a formula editor.

#### Number of limit values

30 limit values (individual channel assignment)

#### Function of analog universal inputs

You are free to choose between the following measured variables for each universal input: U, I, RTD, TC, pulse input or frequency input.

#### Calculated values

The values of the universal inputs can be used to perform calculations in the mathematics channels.

Measuring range of analog universal inputs

According to IEC 60873-1: An additional display error of  $\pm 1$  digit is permitted for every measured value.

Measuring ranges which can be selected per universal input:

Measured variable	Measuring range	Maximum measured error of measuring range (oMR), RTD temperature drift	Input impedance
Current (I)	0 to 20 mA; 0 to 20 mA quadratic 0 to 5 mA 4 to 20 mA; 4 to 20 mA quadratic -20 to 20 mA Overrange: up to 22 mA or -22 mA	$\pm 0.1\%$ oMR	Load: 50 Ohm $\pm 1$ Ohm
Voltage (U) >1 V	0 to 10 V; 0 to 10 V quadratic 0 to 5 V 1 to 5 V; 1 to 5 V quadratic $\pm 10$ V $\pm 30$ V	$\pm 0.1\%$ oMR	$\geq 1$ MOhm

### Maximum load of inputs

Limit values for input voltage and current as well as cable open circuit detection/line influence/temperature compensation:

Measured variable	Limit values (steady-state, without destroying input)	Cable open circuit detection/line influence/temperature compensation
Current (I)	Maximum permitted input voltage: 2.5 V Maximum permitted input current: 50 mA	4 to 20 mA range with disengageable cable open circuit monitoring to NAMUR NE43. The following error ranges apply when NE43 is switched on: $\leq 3.8 \text{ mA}$ : underrange $\geq 20.5 \text{ mA}$ : overrange $\leq 3.6 \text{ mA}$ or $\geq 21.0 \text{ mA}$ : open circuit (display shows: - - - -)
Pulse, frequency (I)	Maximum permitted input voltage: 2.5 V Maximum permitted input current: 50 mA	No cable open circuit monitoring
Voltage (U) >1 V	Maximum permitted input voltage: 35 V	1 to 5 V range with disengageable cable open circuit monitoring: $< 0.8 \text{ V}$ or $> 5.2 \text{ V}$ : cable open circuit (display shows: - - - -)
Voltage (U) $\leq 1 \text{ V}$	Maximum permitted input voltage: 24 V	
Resistance thermometer (RTD)	Measuring current: $\leq 1 \text{ mA}$	Maximum barrier resistance (or line resistance): 4-wire: max. 200 Ohm; 3-wire: max. 40 Ohm Maximum influence of barrier resistance (or line resistance) for Pt100, Pt500 and Pt1000: 4-wire: 2 ppm/Ohm, 3-wire: 20 ppm/Ohm Maximum influence of barrier resistance (or line resistance) for Pt46, Pt50, Cu50, Cu53, Cu100 and Cu500: 4-wire: 6 ppm/Ohm, 3-wire: 60 ppm/Ohm Cable open circuit monitoring if any connection is interrupted.
Thermocouples (TC)	Maximum permitted input voltage: 24 V	Cable open circuit detection from 50 kOhm Influence of wire resistance in event of open circuit detection: $< 0.001\%/Ohm$ Error, internal temperature compensation: $\leq 2 \text{ K}$

24 bit

### Totalization

The interim, daily, monthly and yearly value and the total value can be determined (13-digit, 64 bit).

### Analysis

Recording of quantity/operating time (standard function), also a min/max/median analysis within the set time frame.

### Digital inputs

<b>Input level</b>	To IEC 61131-2: logical "0" (corresponds to -3 to +5 V), activation with logical "1" (corresponds to +12 to +30 V)
<b>Input frequency</b>	Max. 25 Hz
<b>Pulse length</b>	Min. 20 ms
<b>Input current</b>	Max. 2 mA
<b>Input voltage</b>	Max. 30 V

### Selectable functions

- Functions of the digital input: control input, ON/OFF message, pulse counter (13-digit, 64 bit), operating time, message+operating time, quantity from time, Modbus slave.
- Functions of the control input: start recording, screen saver on, lock setup, time synchronization, limit monitoring on/off, lock keyboard/navigator, start/stop analysis.

## Output

### Auxiliary voltage output

The auxiliary voltage output can be used for loop power supply or to control the digital inputs. The auxiliary voltage is short-circuit proof and galvanically isolated.

<b>Output voltage</b>	24 V <sub>DC</sub> ±15%
<b>Output current</b>	Max. 250 mA

### Galvanic isolation

*All inputs and outputs are galvanically isolated from each other and designed for the following testing voltages:*

### Relay outputs

A mix of low voltage (230 V) and safety extra low voltage (SELV circuits) is not permitted at the connections of the relay contacts.

#### Alarm relay

1 alarm relay with changeover contact.

#### Standard relay

5 relays with NO contact, e.g. for limit value messages (can be configured as NC contact).

#### Relay switching capacity

- Max. switching capacity: 3 A@ 30 V DC
- Max. switching capacity: 3 A@ 250 V AC
- Min. switching load: 300 mW

#### Switching cycles

>10<sup>5</sup>

### Cable specification

#### Cable specification, spring terminals

All connections to the rear of the unit are designed as screw or spring terminal blocks with reverse polarity protection. This makes the connection very quick and easy. The spring terminals are unlocked with a slotted screwdriver (size 0).

Please note the following when connecting:

- Wire cross-section, auxiliary voltage output, digital I/O and analog I/O: max. 1.5 mm<sup>2</sup> (14 AWG) (spring terminals)
- Wire cross-section, power supply: max. 2.5 mm<sup>2</sup> (13 AWG) (screw terminals)
- Wire cross-section, relays: max. 2.5 mm<sup>2</sup> (13 AWG) (spring terminals)
- Stripping length: 10 mm (0.39 in)

 No ferrules have to be used when connecting flexible wires to spring terminals.

#### Cable type

 Use shielded signal lines for interfaces!

### Power supply

Terminal assignment

10 Terminals on back of device

Supply voltage

- Extra-low voltage power supply unit  $\pm 24$  V AC/DC (-10% / +15%) 50/60Hz
- Low voltage power supply unit 100 to 230 V AC ( $\pm 10\%$ ) 50/60Hz

**i** An overload protection element (rated current  $\leq 10$  A) is required for the power cable.

Power consumption

- 100 to 230 V: max. 35 VA
- 24 V: max. 24 VA

The power actually consumed depends on the individual operating state and the device version (LPS, USB, brightness of screen, number of channels, etc). The active power here is approx. 3 W to 20 W.

Power supply failure

Battery-backed time and data memory. The device starts automatically following a power failure.

Electrical connection

Details about the electrical connection: ([→](#) 11)

Device plug

- Panel-mounted device: connected to mains via plug-in screw terminals with reverse polarity protection
- Desktop version (option): connected to mains via regular-temperature C13/C14 coupler

Overvoltage protection

To avoid high-energy transients on long signal cables, connect a suitable surge arrester upstream (e.g. E+H HAW562).

Interface, communication  
connection data

### USB ports (standard):

*1 x USB port type A (host)*

A USB 2.0 connection is available on a shielded USB A socket at the front of the device. A USB stick, for example, can be connected to this interface as a storage medium. An external keyboard or USB hub may also be connected.

*1 x USB port type B (function)*

A USB 2.0 connection is available on a shielded USB B socket at the front of the device. This can be used to connect the device for communication with a laptop, for example.

### Ethernet interface (standard):

Ethernet interface on back, 10/100 Base-T, plug type RJ45. The Ethernet interface can be used to integrate the device via a hub or switch into a PC network (TCP/ IP Ethernet). A standard patch cable (e.g. CAT5E) can be used for the connection. Using DHCP, the device can be fully integrated into an existing network without the need for additional configuration. The device can be accessed from every PC in the network. Normally only the automatic assignment of the IP address must be configured at the client. When the device is started, it can automatically retrieve the IP address, subnet mask and gateway from a DHCP server. If a DHCP is not used, these settings must be made directly in the device (depends on the network to which the device is to be connected). Two Ethernet function LEDs are located on the rear of the device.

### Serial RS232/RS485 interface (option):

A combined RS232/RS485 connection is available on a shielded SUB D9 socket at the rear of the device. This can be used for data or program transfer and to connect a modem. For communication via modem, we recommend an industrial modem with a watchdog function.

- The following baud rates are supported: 9600, 19200, 38400, 57600, 115200
- Max. line length with shielded cable: 2 m (6.6 ft) (RS232), or 1000 m (3281 ft) (RS485)

 Only one interface can be used at any one time (RS232 or RS485).

Item No.	Operating function (display mode = display of measured values) (Setup mode = operating in the Setup menu)
1	"Navigator": jog/shuttle dial for operating with additional press function. In Display mode: turn the dial to switch between the various signal groups. Press the dial to display the main menu. In Setup mode or in a selection menu: turn the dial anticlockwise to move the bar or the cursor upwards or counterclockwise, changes the parameter. Turning clockwise moves the bar or cursor down or clockwise, changes parameter.
2	LED at SD slot. Orange LED lit when the device writes to the SD card or reads it.
3	Slot for SD card
4	USB B socket "Function" e.g. to connect to PC or laptop
5	Green LED lit: Power supply present
6	USB A socket "Host" e.g. for USB memory stick or external keyboard
7	In Display mode: alternating status display (e.g. set zoom range) of the analog or digital inputs in the appropriate color of the channel. In Setup mode: different information can be displayed here depending on the display type.
8	In Display mode: window for measured value display (e.g. curve display). In Setup mode: display of operating menu
9	In Display mode: current group name, type of evaluation In Setup mode: name of the current operating item (dialog title)
10	In Display mode: displays current date/time In Setup mode: --
11	In Display mode: alternating display indicating the percentage space on the SD card or USB stick that has already been used. Status symbols are also displayed in alternation with the memory information. In Setup mode: the current "direct access" operating code is displayed
12	In Display mode: display of current measured values and the status in the event of an error/alarm condition. In the case of counters, the type of counter is displayed as a symbol.  If a measuring point has limit value status, the corresponding channel identifier is highlighted in red (quick detection of limit value violations). During a limit value violation and device operation, the acquisition of measured values continues uninterrupted.

### System integration

The device has (optional) fieldbus interfaces for exporting process values. Measured values and statuses can also be transmitted to the device via fieldbus. Depending on the bus system, alarms or faults occurring during data transmission are displayed (e.g. status byte). The process values are transferred in the same devices that are used for display at the device.
