

Control Room Technology

**Integrated Enterprise Solution
for mission critical control centers**

About Amprtron

We are a multi-discipline engineering company established in Singapore since 1982. With regional offices in Malaysia, Thailand and Indonesia, Amprtron Group of companies have built a solid foundation of knowledge, experience & references of providing advanced instrumentation, automation & control solution to a wide spectrum of industries in the South East Asia region.

The company is an ISO 9001 certified and registered with the Building & Construction Authority in Singapore. We strive to develop automation solutions that meet our customers' objectives and improve their economic performance by combining our long-standing experience with the power of innovation, future-oriented engineering, high-quality product design and our customer oriented culture; the value proposition that you always expect from.

Expect nothing, but the best!

Our Commitment & Quality Policy

Our team is constantly striving to achieve higher and broader levels of perspective and involvement in the strategic planning, project analysis and operations of our clients.

We work closely and in tandem with them to solve issues of space, technology, work force and business operations in parallel.

This ensures an Integrated Enterprise Solutions rather than piece-meal patches, creating the best possible outcome, a facility that truly works at all levels, 24/7, forever.

Specialised Control Room Designer

The control room is the interface between the personnel and the process. Simple, but reliable process control very much depends on the design of the control room.

Amptron specializes in Control Room Design for markets such as:

- Utilities; Water, Electricity and Gas
- Process Control
- Telecommunications
- Traffic and Transportation
- Security and surveillance

Apart from the technical and economic requirements, the ergonomic and human factors are given special consideration.

Our vast experience and high profile works in the region are a testimony of our value proposition for your mission critical control applications.
